Comfortable. Reliable. Cost-Effective.

Monitor your network quality **with RANtor**

Optimize your wireless network operation for critical business and operational processes:
With RANtor, msg offers you a reliable, versatile and cost-effective monitor of the network quality.

Wireless networks are already replacing the communication infrastructure of many companies. Fast cellular standards in particular offer high data bandwidth and low latency. For monitoring the mobile network quality, measurement capabilities of network elements or cost-intensive probing systems are established with complex data analysis and costly integration into the infrastructure.

RANtor is the first holistic solution for your company that ensures convenient, reliable and affordable monitoring of network quality. Via web access, you have access at any time to a dashboard with the network values and KPIs that are critical for you. An integrated alarm function enables you to respond promptly to minimize costly downtime for your business-critical processes.
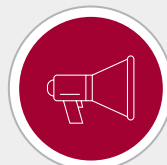

For this, distributed measurement probes interact with a measurement server, which coordinates measurements and provides them for data storage and analysis in a cloud.

msg customers are successfully using RANtor as Software/Product as a Service (SaaS/PaaS), among other things.

Service portfolio of RANtor

Browser-based
dashboard

Alarming in case of failures
or limit value violations

Regular KPI report for a
holistic overview

Monitoring
of network quality

Verification
of guaranteed KPIs

Integration also
in campus networks

value – inspired by people

.msg

Your benefits with RANtor

Intuitive and convenient dashboard

For direct overview of your measurement data

Reliable could solution

For integrating your data analysis via web access

Affordable terminals

Thanks to a Raspberry - Pi solution

Location-based network monitoring

For targeted optimization of your business processes at the point of use

Modular adjustment options

To meet your individual requirements

Data processing in Germany

For your data to be handled in line with GDPR

Would you like a non-binding presentation?
We would be pleased to show you how you can conveniently monitor your network quality with RANtor.
